

User Stories

Choose softskill

As an user who is learning

I want to choose the softskill
I want to work on

To avoid the system
assigning me one I'm not
interested in
To avoid unconformities

Progress recognition

As an user who is learning

I want the system to
recognize my progress

To be able to consider the
activities I already
completed and those that I
have yet to complete

Completed content

As an user who is learning

I want to be granted access
by the system to my
previously completed
activities

To be able to do these
activities again if I need to
revisit material on a specific
soft-skill

Soft-skills categorization

As an user who is learning

I want to have the content in
categories, according to the
soft-skill

To allow me to view the
content in a neater way and
consequently find more
quickly the content I want to
access

Progress saving

As an user who is learning

I want the system to save
my progress

So I don't have to start the
course from scratch every
time I enter the app

It's important to emphasize the progress will only be saved locally and in case the user wants to change devices they will have to manually move the files

Acceptance criteria

Choose a soft skill

Details:

- The list of soft skills contains their respective name, an image, and the number of activities.
- The list will be a single vertical column.

Progress recognition

Details:

- The user will be able to click on a box located on the top right of the screen, so the activity can be marked as done.
- When the user enters an activity they will immediately notice the "Done?" box filled with a check mark, if they have already completed the activity.

Completed content

Details:

- The activities will always be available for the user, even if they haven't been completed them before.
- The list of activities will remain the same, so the user can complete them in the order they prefer.

Soft skills categorization

Details:

- The soft skills will be categorized by having a different image related to the soft-skill at issue.

Progress saving

Details:

- The progress will be saved on the device the user is currently learning the soft skills.
- When the user starts the app, all the progress will remain as the last time the app was being used.
